SPACE LAB

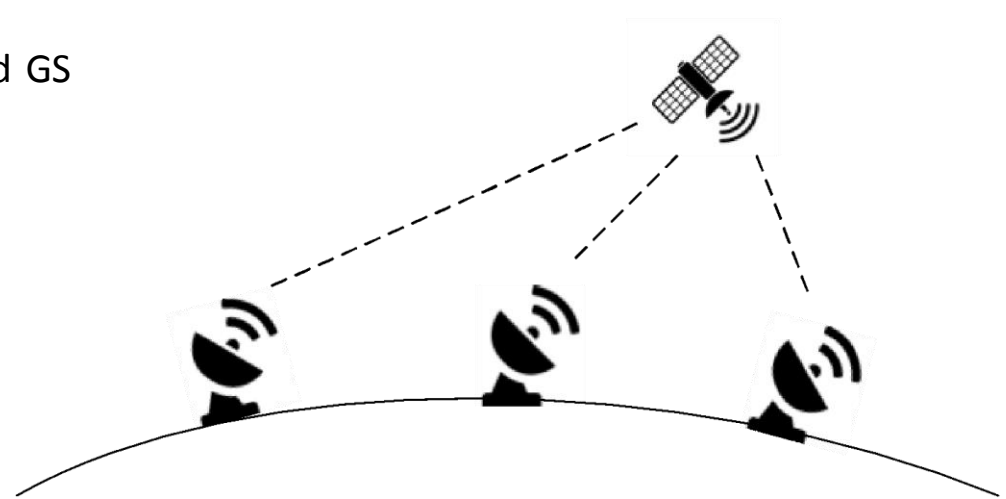

- One of the CubeSat in QB50 project.
- Deployed by ISS in middle of May in 2017.
- Scientific research

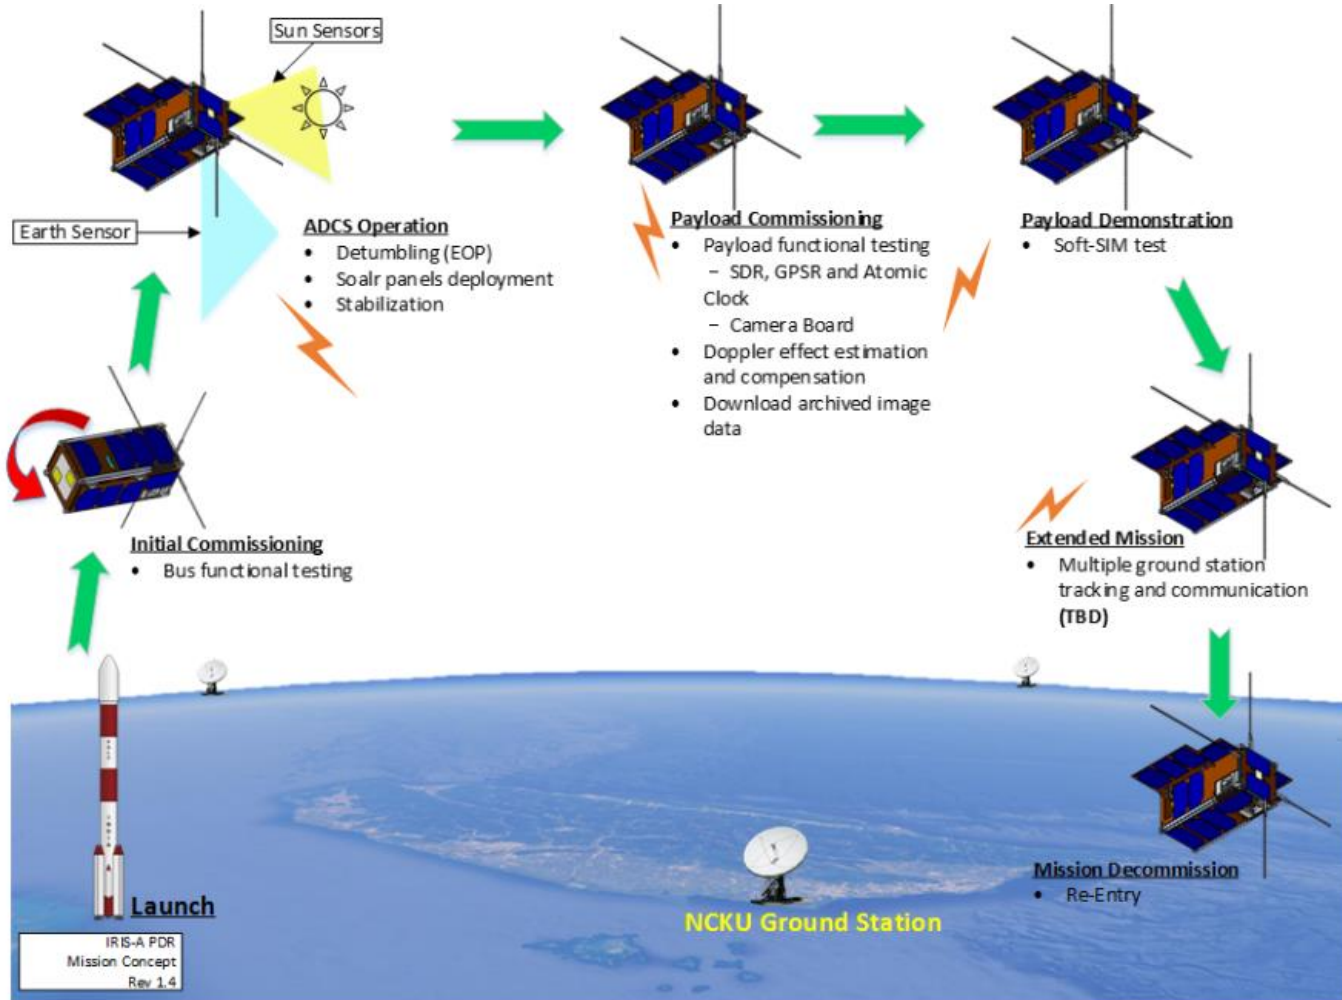

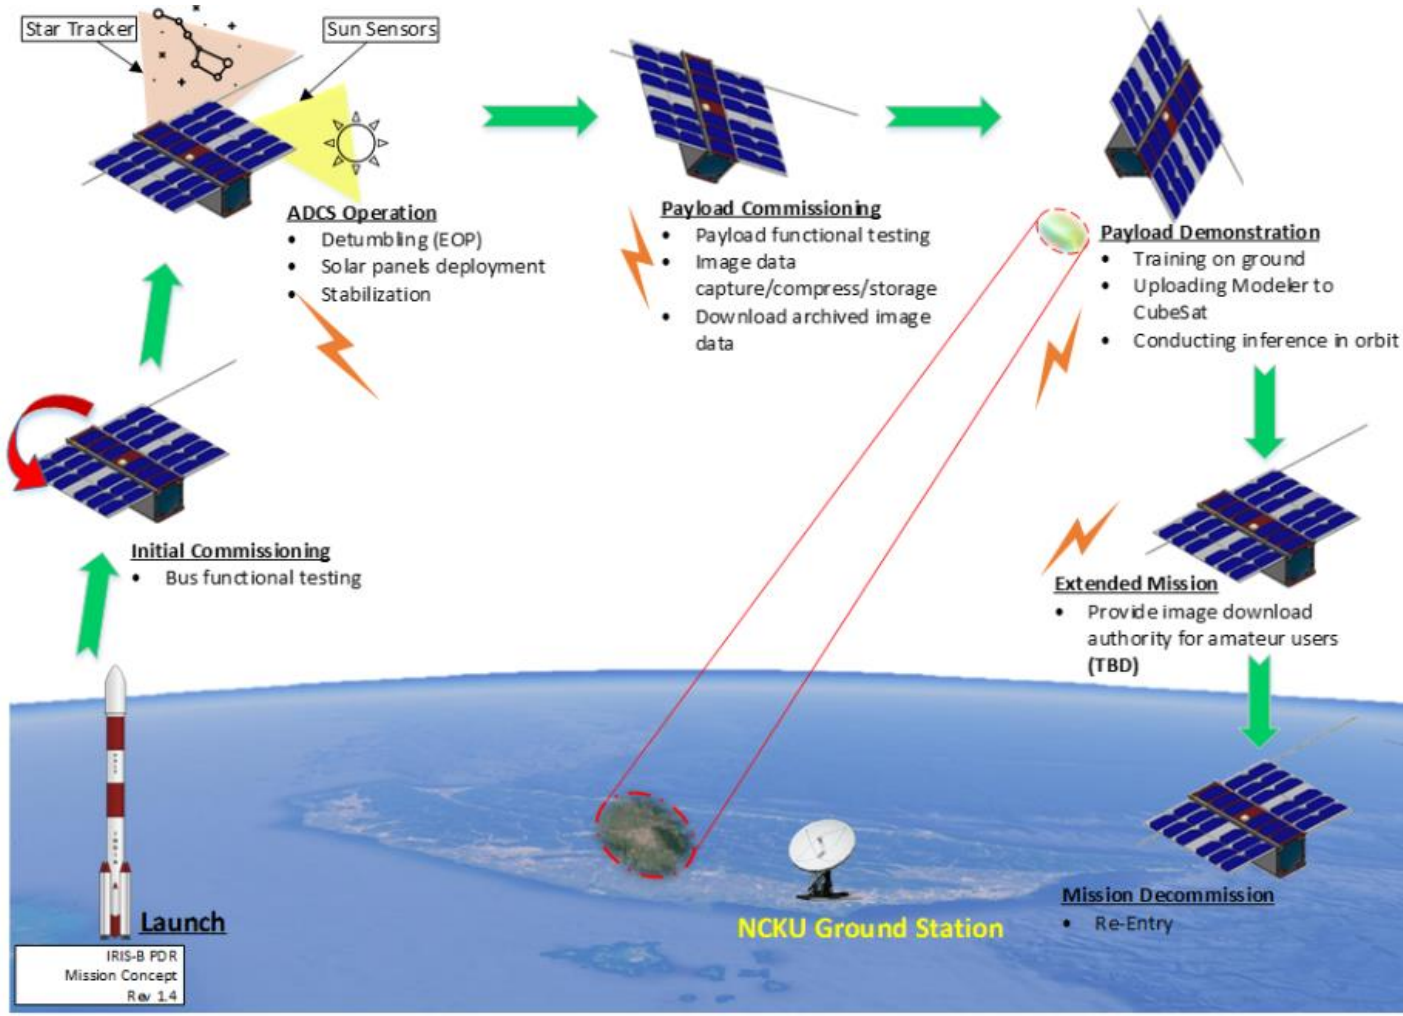

- Approved and funded by MOST, Taiwan in 2018
- Design, develop, launch, and operate two LEO CubeSat
- Objective :
 - IRIS A: Demonstrate Internet of Things
 - IRIS B: Demonstrate in-orbit intelligent remote sensing technology

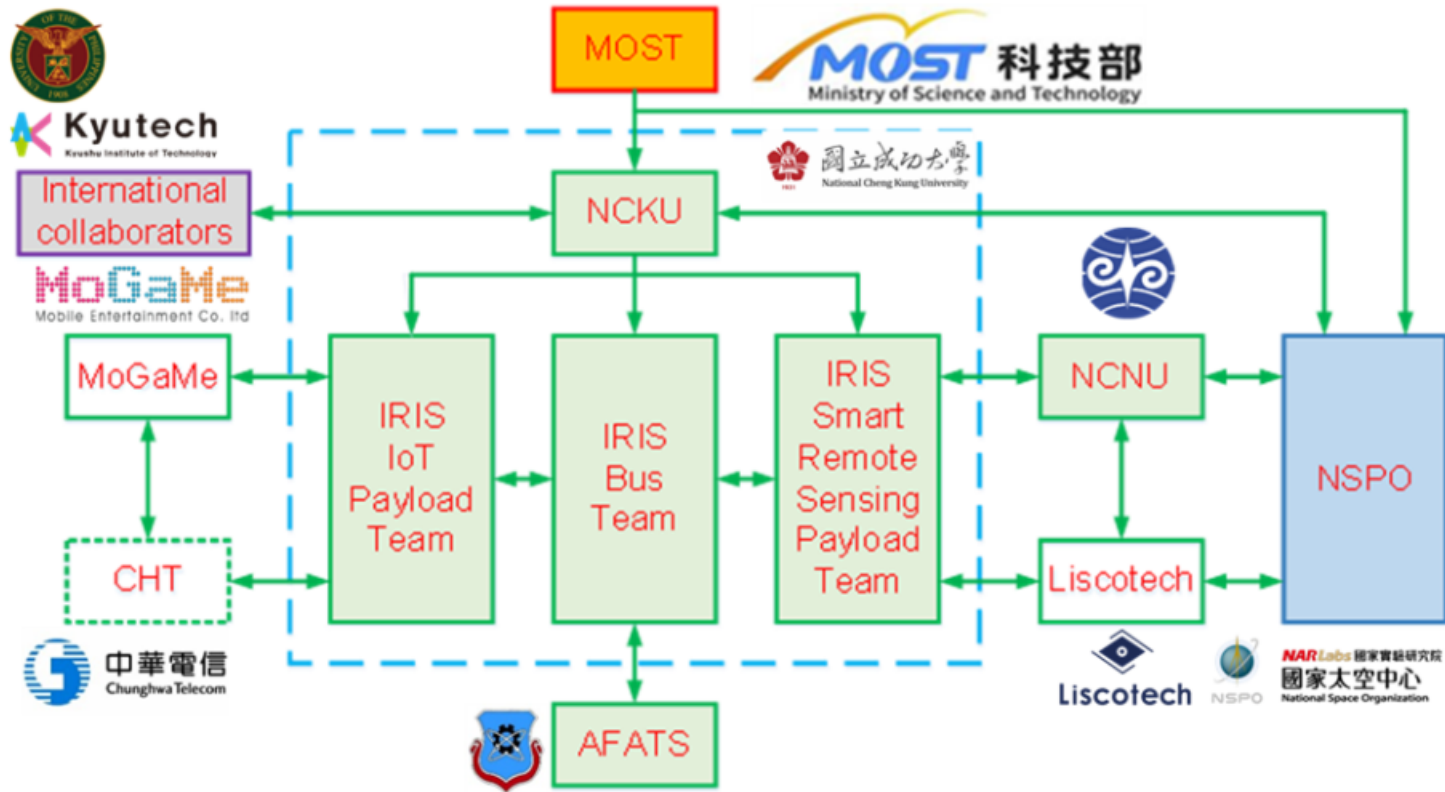

- **Challenge**
 - **The lack of frequency bandwidth** for data communication
- **Key feature implemented in payload**
 - **Auto recognition**
 - find the registered GS by satellite itself
 - **Auto frequency allocation**
 - assigned by the connected GS
 - **Handover mechanism**
 - from one GS to another
